

Why your sofa, mattress, curtains and carpet need *more than just cleaning.*

You cannot see them. You cannot smell them. But inside your soft furnishings, millions of tiny creatures are living – and every day you breathe what they leave behind.

This guide explains the problem and how our two-step Full Protocol™ solves it completely.

THE PROBLEM
What lives inside

STEP 1
Enzymatic HydroClean™

STEP 2
SteamPro Disinfection™

THE PROBLEM

What is actually *living inside your home?*

Your soft furnishings are home to millions of invisible creatures.
Here is what lives inside them right now:

DUST MITES

Tiny creatures too small to see. They eat dead skin cells shed by your body every day and love warm, soft places — your mattress and sofa are their perfect home.

DUST MITE FECES

This is what actually makes you sick. When you sit or lay down, their waste goes airborne — and you breathe it directly into your lungs.

BACTERIA & MOLD

Moisture from sweat and humidity lets bacteria and mold grow deep inside your fabric — completely invisible but dangerous over time.

CURTAINS & CARPETS

Every time you open curtains or walk on a carpet, a cloud of feces, spores and allergens is released into the air your family breathes all day.

1 gram of mattress dust

can contain up to 250,000 dust mite feces particles.

Every movement releases what lives inside.
The cycle standard cleaning never breaks.

THE FULL PROTOCOL™ — DEEP CLEAN + MEDICAL DISINFECTION — BREAKS THE CYCLE

STEP 1 OF 2 — THE FULL PROTOCOL™

Enzymatic HydroClean Treatment™

The first step is a deep clean — not a surface wipe. Enzymatic solutions are applied directly to the fabric and work deep into every fiber, breaking down organic matter that has built up over time.

WHAT IT REMOVES:

- Stains and body oils embedded in the fiber
- Sweat residue and moisture buildup
- Mold residue and organic contamination
- Allergen buildup accumulated over months or years

HOW IT WORKS:

Cold water extraction is applied after the enzymatic treatment, pulling everything the enzymes have dissolved completely out of the fiber. The result is a deep-cleaned surface, free of organic contamination — and ready for disinfection.

Cold water

extraction method

Enzymatic

formula — no harsh chemicals

2-3 hours

to dry under aircon

STEP 2 OF 2 — THE FULL PROTOCOL™

SteamPro Medical Disinfection™

Once the fiber is clean, the second step destroys everything that cleaning alone cannot remove. Dry steam at 180°C is applied deep into the fabric — killing dust mites, bacteria, mold spores and all biological matter at the source.

WHAT IT DESTROYS:

- Dust mites and their feces — completely eliminated
- Bacteria and mold spores — destroyed on contact
- All remaining allergens — deep inside every layer
- 99.999% of pathogens — certified medical-grade result

WHY IT WORKS WHERE NOTHING ELSE DOES:

At 180°C, the steam penetrates all the way through cushions, mattresses, curtains and carpets — reaching every layer where the problem lives. No spray or vacuum can reach this deep. No chemicals used. No moisture left behind.

180°C

Dry steam — twice boiling

99.999%

Pathogens eliminated

ZERO

Chemicals or residue

THE RESULT — THE FULL PROTOCOL™

After both steps,
your home is genuinely
clean — not just clean-looking.

Organic matter fully removed

Enzymatic HydroClean™ extracts stains, oils and allergen buildup.

99.999% of pathogens destroyed

SteamPro™ certified — not a marketing claim.

No chemicals used

Safe for children, babies and pets immediately after.

Gets dry in 2-3 hours

Under air conditioning — ready to use the same day.

Every surface treated

Sofas, mattresses, carpets, curtains and chairs.

Ready for The Full Protocol™?

Sofas · Mattresses · Carpets · Curtains · Chairs
Available for homes, villas and hotels in Phuket.
